## Good Code Properties

### ③ Security

### ③ Understand and Maintainable

## ③ Time and Space Efficiency Complexity

## Pass

- ▷ Pass acts as a placeholder
- ▷ You can use this to create empty blocks for later revision

## Continue

- ▷ Skips iteration

All the code written after  
continue will be ignored

```
for i in range(S, E, J):  
    _____  
    _____  
    _____  
    continue  
    _____  
    _____
```

Line 5  
Line 6

Let's say @  $i=3$  we visit continue

for i in range(5):

\_\_\_\_\_  
\_\_\_\_\_

0  
1  
2  
3  
4  
= 4

[code will enter for loop 5 times]

S=0

J=1

Break

for i in range(S, E, J):

\_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_

break

Line 5  
Line 6

→ this code is outside of For Loop

Note: Break exits the loop

# Nested Loop

Loop inside Loop

```
for i in range(3):  
    for j in range(2):  
        print(i, j)
```

$i=0 \rightarrow j=0$   
 $j=1$

$i=1 \rightarrow j=0$   
 $j=1$

$i=2 \rightarrow j=0$   
 $j=1$

(0, 0)  
(0, 1)  
(1, 0)  
(1, 1)  
(2, 0)  
(2, 1)

①  
②  
③  
④  
⑤  
⑥

i x j  
3x2

for i in range(2):

for j in range(3):  
print(i, j)

resetted  
for every i

i = 0 → j = 0 (0, 0)  
                    j = 1 (0, 1)  
                    j = 2 (0, 2)

i = 1 → j = 0 (1, 0)  
                    j = 1 (1, 1)  
                    j = 2 (1, 2)

for i in range(3)

for j in range(i, 3):

i = 0 → j (0, 3) → 3 j's

i = 1 → j (1, 3) → 2 j's

i = 2 → j (2, 3) → 1 j's

# GCD

$\min(\text{num1}, \text{num2})$

for loop on  $\min$

check if  $i$  divides both

$$\begin{array}{r} 2 \overline{) 6} \\ 3 \end{array}$$

$$\begin{array}{r} 2 \overline{) 8} \\ 2 \overline{) 2} \\ 1 \end{array}$$

GCD

$$n = 16$$

$$m = 24$$

Largest  
Is a number that divides both  
16 and 24

$$16 \div 8 \rightarrow 0$$

$$24 \div 8 \rightarrow 0$$

LCM

Least Common Multiple

$$i \% n == 0 \text{ and}$$

$$i \% m == 0$$

$$24 \% 6 == 0$$

$$24 \% 8 == 0$$

$$32 \% 6 \neq 0$$

$$24 \% 6 = 0 \text{ ?}$$

$$[24, 48]$$

$$48$$

$$CM \quad ]$$

$$i = 0$$
$$n = 6$$
$$m = 8$$

$$i \% m == 0$$
$$i \% n == 0$$
